

Dan Stein

Cape Town, South Africa

The MRC Unit on Anxiety and Stress Disorders, directed by Prof Dan Stein, researches the psychobiology and management of anxiety and related disorders, including the obsessive-compulsive spectrum disorders, and posttraumatic stress disorder. We also have international collaborations in a number of other areas, including substance use disorders, and neuroHIV/AIDS. We employ a range of methods that might be of interest to ECNP interns; including neurogenetics, brain imaging, Cochrane reviews, and clinical trials.
